

TennCare Preferred Drug List (PDL)

Effective November 1, 2017

PA – Prior Authorization required, subject to specific PA criteria; QL – Quantity Limit (PA & NP agents require a PA before dispensing);

B – Budgetary Reduction edit for utilization control (Standard NP PA criteria does not apply); ID – Class PA for patients with Intellectual or Developmental Disability

Please note the following:

- **Approval of NP agents** requires trial and failure, contraindication, or intolerance of 2 preferred agents, unless otherwise indicated
- With the exception of the “Branded Drugs Classified as Generics” list, TennCare is a mandatory generic program in accordance with state law (TCA 53-10-205). Approval of a branded product when a generic is available **requires** documentation of a serious adverse reaction from the generic via a FDA MedWatch form **OR** contraindication to an inactive ingredient in the AB-rated generic equivalent. Therapeutic Failure of an AB-rated generic equivalent may be considered for approval of branded products in the following high-risk medication classes: Anticonvulsants, Atypical Antipsychotics, HIV antivirals, Immunosuppressants, and Oncology Agents.
- Unless otherwise noted, all agents listed on the PDL are referencing legend drugs which are prescription-required agents. Coverage of Over-the Counter (OTC) Products is listed at: https://tenncare.magellanhealth.com/static/docs/Program_Information/TennCare_Covered_OTC_Products.pdf

Effective March 1, 2014, the **initial** fill of oncology products will be limited to a 14 days' supply. If the initial 14 days' supply is tolerated, the member is eligible to receive the remainder of the first months' supply without additional co-pay by the pharmacy submitting a Submission Clarification Code (NCPDP D.O field # 42Ø-DK) of 2. After the initial month, members may continue to receive up to a 31 days' supply of oncology products per fill.

Note: For Ramp-Up Phase Dosing of Venclexta[®], please dispense a 7-day supply of 10 mg tablets (for 20 mg dose), followed by a 7- day supply of 50 mg tablets.
